

CS 1410 – Summer 2018

Assignment #1

Introduction

The purpose of this assignment is to verify that:

- Your system is setup properly
- You can create files
- You can create Javadoc files
- You know how to submit assignments

Requirements

Create a program that does the following:

1. Creates two class member variables (This means they're inside the class)
 - a. fName stores your first name
 - b. lName stores your last name
2. Create a method called printName that will print your name and a message to the command line.
(Use the Hello World template to see how to print)
3. Call printName from the main method, do not just have the print statement in the main method.
4. Use standard class conventions (see class conventions document)

Submission

Submit your files on Canvas. If you followed the guidelines in the class conventions documentation you will be fine.

Include:

1. All standard files (see class convention document)
2. In readme folder Screenshot jpg of your IDE including
 - a. Source file in main window
 - b. Console output of program
 - c. Project file structure showing location of
 - i. .java files
 - ii. Javadoc html files

Notes/Help

Review the demo code and setup instructions to help you out.

Due: June 27, 2018
